1. A one-seeded fruit with a skinny epicarp, a fibrous and usually juicy mesocarp and a stony endocarp is called:
   (A) Berry  (B) Hesperidium  (C) Pepo  (D) Drupe

2. A fleshy fruit in which there is no hard part except seeds is called:
   (A) Berry  (B) Pome  (C) Legume  (D) Follicle

3. Members of Citrus group having juicy hairy outgrowths from the endocarp belong to which of the following fruit categories?
   (A) Pome  (B) Drupe  (C) Hesperidium  (D) Capsule

4. Pumpkin fruit is categorized as:
   (A) Drupe  (B) Pepo  (C) Siliqua  (D) All of the above

5. A false fruit in which actual fruit is surrounded by a fleshy edible thalamus is termed as:
   (A) Pome  (B) Siliqua  (C) Pyxis  (D) Berry

6. In Pomegranate the succulent testa is edible and seeds are attached irregularly. This fruit is called:
   (A) Balausta  (B) Berry  (C) Samara  (D) Legume

7. Which of the following legumes does not open when ripe?
   (A) Pisum sativum  (B) Lilium longiflorum  (C) Arachis hypogaea  (D) Papaver somniferum

8. Fruit of Acacia (Babool) is constricted between the seeds and usually breaks up into bits containing one or more seeds, and is known as:
   (A) Nut  (B) Legume  (C) Follicle  (D) Lomentum
9. Strawberry is an example of:
(A) Leathery fruit  (B) Dry fruit
(C) Aggregate fruit  (D) Siliqua

10. A typical fruit belonging to Cruciferae family, which is initially a one-chambered fruit but becomes two chambered due to the development of a false replum and the dehiscence is along both the sutures from base upwards while the seeds remain attached to the replum.
(A) Legume  (B) Siliqua
(C) Capsule  (D) Lomentum

11. A simple dry fruit of family Poaceae in which the pericarp is fused with seed coat.
(A) Pome  (B) Pepo
(C) Siliqua  (D) Caryopsis

12. Fruit of *Anacardium occidentale* (cashew) belongs to which of the following categories?
(A) Follicle  (B) Nut
(C) Legume  (D) Drupe

13. A fruit of *Calotropis procera* belongs to which of the following types?
(A) Nut  (B) Berry
(C) Drupe  (D) Etaerio of Follicles

14. A multiple fruit developed from spadix and the flower fuse together by their succulent sepals. The axis grows fleshy or woody and the whole inflorescence forms into a compact mass. The fruit type is termed as:
(A) Fibrous drupe  (B) Schizocarp
(C) Sorosis  (D) Utricle

15. A simple dry fruit in which a flattened wing of fibrous, papery tissue develops from the ovary wall is called:
(A) Samara  (B) Schizocarp
(C) Pepo  (D) Caryopsis

16. A type of multiple fruit developed from ripening of the hypanthodium inflorescence is called:
(A) Nut  (B) Syconus
(C) Drupe  (D) Legume

Answers:
1(D)  2(A)  3(C)  4(B)  5(A)  6(A)  7(C)  8(D)  9(C)  10(B)  11(D)  12(B)  13(D)  14(C)  15(A)  16(B)
