1 Fig. S1 – EDX mapping of ZnO-4 microspheres (a) before and (b) after calcinations. 2
2 Fig. S2 – FTIR spectra of (a) (+)-catechin; (b) ZnO-2; (c) ZnO-3; (d) ZnO-4 respectively. 2
3 Fig. S3 – Thermogravimetric analysis of (a) (+)-catechin; (b) ZnO-4; (c) ZnO-3; (d) ZnO-2, and, (e) ZnO-1 respectively. 3
4 Fig. S4 – Fluorescence spectra of 7-hydroxy coumarin generated from coumarin with (a) Degussa P25 and (b) ZnO-4 as photocatalyst in presence of UV irradiation. 3
5 Fig. S5 – Thermogravimetric analysis of ampicillin loaded ZnO-1(rod shaped) and ZnO-4 (microspherical) particles. 4
6 Fig. S6 – (a) Structure of ampicillin; (b) Release profile of drug ampicillin from synthesized ZnO particles as a function of time. 4
Fig. S1 – EDX mapping of ZnO-4 microspheres (a) before and (b) after calcination.

Fig. S2 – FTIR spectra of (a) (+)-catechin; (b) ZnO-2; (c) ZnO-3, and, (d) ZnO-4 respectively.
Fig. S3 – Thermogravimetric analysis of (a) (+)-catechin; (b) ZnO-4; (c) ZnO-3; (d) ZnO-2; (e) ZnO-1 respectively.
